

हमारा पुरातन-हमारा गौरव....

CALENDAR 2022

The modern world likes to take credit for many technological inventions, but we fail to mention that often many of these "discoveries" are nothing but re-inventions based on the knowledge our ancestors possessed long ago.

In ancient times, India was one of the most advanced nations in the world. India has made many valuable contributions to the world. Centuries ago, Indian sages had the kind of knowledge which many modern scientists lack. Many Indian sages made discoveries that no one could think of back in those times.

In this top list, we present some of the most prominent sages from India who made some mind-blowing contributions.

baachearya baadhaiyana

(800 BC - 740 BC)

The Baudhāyana Sulba Sūtra states the rule referred to today in most of the world as the Pythagorean Theorem. The rule was known to a several ancient civilizations, including also the Greek and the Chinese, and was recorded in Mesopotamia as far back as 1800 BCE. For the most part, the Sulbasūtra-s does not contain proof of the rules which they describe. The rule stated in the Baudhāyana Sulba Sūtra is:

दीर्घचतुरश्रस्याक्षण्या रज्जुः पार्श्वमानी तिर्यग्
मानी च यत् पृथग् भूते कुरुतस्तदुभयं करोति ॥

महर्षि भारद्वाज

(BCE)

Maharshi Bhardwaj was one of the greatest Hindu sages whose accomplishments are detailed in the Puranas. His works include astonishing and outstanding discoveries in aviation science, space science and flying machines. He has described three categories of flying machines: (1) One that flies on earth from one place to another. (2) One that travels from one planet to another. (3) And one that travels from one universe to another. It is said that his work on the art of flying is unparalleled.

आचार्य चरक

(6th - 2nd century BCE)

Acharya Charaka has been crowned as the Father of Medicine. His renowned work, the "Charak Samhita", is considered as an encyclopedia of Ayurveda. He has described the medicinal qualities and functions of 100,000 herbal plants. His research on human anatomy, embryology, pharmacology, blood circulation, and diseases like diabetes, tuberculosis is simply mind-blowing. He strongly proponent that diet has an effective influence on the mind and body.

व्याचर्या इश्वरुत

(1200-600 BCE)

The Indian surgeon Sushruta is credited as being the founding father of surgery. In his treatise "Sushrut Samhita", he has described over 300 surgical procedures and 125 surgical instruments, including scalpels, lancets, needles, catheters, and rectal speculums; mostly designed from the jaws of animals and birds. He has also described several stitching methods; the use of horse's hair as thread and fibers of bark. His research was pioneering not only in the field of plastic surgery but he also made some groundbreaking contributions to the field of anesthesia. Interestingly, even before Hippocrates, he had prescribed an ethical code for medical practitioners.

आचार्य कानदे

(600 BCE)

In modern times, John Dalton has been credited as the inventor of the atomic theory. However, he was not the first one to discover the concepts of atoms. About 2,600 years ago, Acharya Kanad, an Indian philosopher and a great thinker far ahead of his time, developed what we today call the atomic theory. He was the first person in the world who talked about objects and elements that create them. He gave the concepts of atoms and how they bond together to form larger particles. He studied atomic theory and found the way atoms move and react with each other.

चाणक्य चानक्य

(371 - 283 BCE)

Chanakya or Vishnu Gupta or Kautilya served as a minister in the court of Chandragupta and Bindusara. He authored the ancient Indian political treatise called Arthashastra. Chanakya is considered the pioneer of the field of economics and political science and his work is thought of as an important precursor to Classical Economics. Chanakya's works predate Machiavelli's by about 1,800 years. Chanakya was a teacher in Takshashila, an ancient center of learning.

Panini is known for his Sanskrit grammar, particularly for his formulation of the 3,959 rules of Sanskrit syntax and grammar known as Ashtadhyayi. Panini's grammar is the world's first formal system, developed well before the 19th century innovations of Gottlob Frege and the subsequent development of mathematical logic. In designing his grammar, Panini used the method of "auxiliary symbols", in which new affixes are designated to mark syntactic categories and the control of grammatical derivations. This technique, rediscovered by the logician Emil Post, became a standard method in the design of computer programming languages.

आचार्य अर्यभट्ट

(476-550 CE)

Aryabhatta was a master Astronomer and Mathematician. He wrote a text on astronomy and an unparalleled treatise on mathematics called Aryabhatiya. He formulated the process of calculating the motion of planets and the time of eclipses. Aryabhatta was the first to proclaim that the earth is round, it rotates on its axis, orbits the sun, and is suspended in space - 1,000 years before Copernicus. He is also acknowledged by many as the first person who calculated the value of Pi. And above all, his most spectacular contribution was the concept of zero without which modern computer technology would have been non-existent.

ब्रह्मगुप्त ब्रह्मगुप्त

(1114-1185 CE)

Bhaskaracharya's mathematical works called "Lilavati" and "Bijaganita" are considered to be unparalleled. Bhaskaracharya was the first to discover gravity, 500 years before Sir Isaac Newton. In the "Surya Siddhant" he makes a note on the force of gravity:

"Objects fall on earth due to a force of attraction by the earth. Therefore, the earth, planets, constellations, moon, and sun are held in orbit due to this attraction."

Bhaskara accurately calculated the time that earth took to revolve around the Sun as 365.2588 days that is a difference of 3 minutes of modern acceptance of 365.2563 days. He is also considered to be a pioneer in the field of algebra.

हमारा पुरातन-हमारा गौरव....
